

## Wound Irrigation

Improves wound irrigation by effectively removing bacteria from the wound. Promotes cleansing and healing. Unique shape and design eliminates back splash, therefore, reducing the worry of cross contamination of blood-borne pathogens.

### Features & Benefits

- Optimal cleansing –provides wound irrigation with the recommended 8-12 psi of pressure to maximize cleansing and healing.
- Safety – dual exit portals, located at both ends of the shield, neatly and safely direct effluent removal with no back splash.
- Visibility – clear plastic shield provides complete visibility.
- Easy use – ability to be operated with one hand.
